## FILM SPOOLS

**WHAT SIZE ?** - Capacities shown are approximate, and are usually conservative considering the reduced thickness of polyester film. To calculate running times, 1000' of 35mm film running at 90 feet per minute runs for approx 11 minutes. 100m runs for approximately 3.5 minutes

### WHICH SPINDLE SIZE ?

**16mm** projectors usually utilise square drive 9mm shafts

**35mm** projector shafts come in three sizes;

5/16" - USA standard, some preview theatres. Key drive

3/8" (9mm) - Most European projectors. Pin drive

1/2" (12.7mm) - Some USA projectors, all long play tower systems.

Pin drive

**70mm** - 1/2" (12.7mm)

*Note - special shipping rates apply to spools due to their bulk*
